## **Abstract:**

In Matang, Perak, the production of charcoal, building pile and also timbers are come from the mangrove trees. For economy generation on this sector, deforestation is necessary for large scale production operations. But for the environment, immediate reforestation is very crucial for the mangrove to sustain. Deforestation and products processes require plenty workers and the worker aspects and technology are related towards productivity. Workers age, payment and safety will play role towards productivity. The technology used also an important aspect to be studied for the effect on production rate. Sustaining mangrove is a social responsibility issue that is about the mangrove reforestation method in the area. The mangrove trees need to be managed in a very systematic way in order to ensure the continuity of ergonomically balance in its sector, and can be globally practiced.

**Key words:** Age, payment, safety, technology, social responsibility.
